Test case name	Goals to test	Description	Result
Register	The Register Page	We take id of email text field ,in function (find) we pass to 'send keys' our email(ex:emailtotest2451@gmail.com) to test with ,then we take submit button id and pass it's value to another find function + .click () to click on the button	Program takes the entered email value then press submit button,then verify the non required fields in the form.{passed}
Search Product	Search Bar for specific product	We are testing the functionality of the search by comparing between the data typed in search bar and the text appeared.Example ("Results found of x) or (Results not found of x) ,while x is the data typed in search input field.	The program takes data the input field of search and then compare it with show text in the field.we're not looking to compare if data found in database or not we are testing the search feature itself. {passed}
verifyAddingWish_WO_Log in	Verify that adding to wish list is not working if not Signed in	In this test case we check if the users without account can add any product to their wish list or not by using linktext in women category ,xpath while selecting a random product. In the end we check the error message by assert	Error message appears when user without account try to add product to her / his wish list.{passed}
verifyAddingWish_LoggedIn	Verify that adding to wish list is working while user is signed in	In this test case we check if the users with signed in account can add any product to their wish list	Confirmation Message appears {Passed}
verifyQuantityReflection	Total price before checkout increased or decreased depending on user action	We select the cart then close the window appears to go to checkout section where the price and ( +) and ( -) buttons if we pressed (+) value must be doubled in total price section	The total price increased or decreased depending on which button we choose under the product. {passed}
